

Healthcare AI Analytics

Purpose and context

A graduate healthcare analytics prototype that distinguishes supported questions from unsupported requests and answers from validated project assets.

Approach

- Validate intake data and enrichment joins.
- Explore facility volume, length of stay, payer mix and DRG patterns.
- Connect governed Q&A with visual analytics and report workflows.

Documented evidence

- Governed Q&A workflow
- Data validation and join assessment
- Visual analytics and reporting

Outcome and interpretation

The documented workflow separates supported questions from unsupported requests. Missing outcome fields lead to an explanation and research plan, not an invented clinical answer.

Scope and limitations

Graduate prototype; not a production clinical, financial or reimbursement decision system. Raw healthcare data is not included.

Evidence status

Prepared from curated project records. This document summarizes existing work; it is not a fresh test execution or independent certification. The separate evidence report identifies supporting records and any outstanding validation.
