

Professional Portfolio Platform

Purpose and context

A version-controlled knowledge system connecting career claims, project evidence, reusable documentation and AI handoffs.

Approach

- Organize capabilities, projects and evidence.
- Maintain curated JSON memory and project context summaries.
- Prepare résumé and case-study material with human review.

Documented evidence

- Structured project knowledge
- Reusable professional artifacts
- AI handoff and archive workflows

Governance and evidence indexing

PPP relates capabilities, projects, artifacts and claims to supporting evidence. Its documented Knowledge Core defines authority, freshness, confidence, provenance and visibility rules. Evidence coverage reports identify missing, unusable, restricted, weak or draft support. Source references help locate supporting documents without copying private evidence into public outputs. This supports traceability and context retrieval; it is not a claim of automatic lost-file restoration.

Outcome and interpretation

Career claims, reusable professional artifacts and AI handoff notes are organized in version-controlled project context. This portfolio is one consumer of that curated source material.

Source basis

PPP README, Knowledge Core README and portfolio relationship model, plus public-safe claim standards. The relationship model is documentation-first, not a deployed graph database. No new validator or recovery test was run for this case study.

Scope and limitations

Curated project documentation and knowledge organization. Private source archives and employment records are not shared here.

Evidence status

Prepared from curated project records. This document summarizes existing work; it is not a fresh test execution or independent certification. The separate evidence report identifies supporting records and any outstanding validation.
