

Crop Bot Regional Yield Screening

Purpose and context

Built an interactive corn-yield screening application that helps reviewers compare regional predictions and candidate selections. Placed third in the AI hackathon as a member of Crop Circuits.

Approach

- Organize regional predictions into a clear four-region review workflow.
- Connect supplied predictive models to an interactive application.
- Present screening thresholds, review flags and downloadable candidate results.

Documented evidence

- Interactive regional screening and candidate comparison.
- Downloadable prediction results for reviewer follow-up.
- Third-place finish in the AI hackathon as a member of Crop Circuits.

Outcome and interpretation

Translated model predictions into an interactive application for comparing regional corn-yield estimates and candidate selections. Placed third in the AI hackathon as a member of team Crop Circuits. Scheduled to present with the team at the AI in Agriculture Symposium on September 21, 2026.

Scope and limitations

Hackathon prototype using retrospective evaluation data. Technical validation details are available in the supporting evidence report; protected data and model bundles remain private.

Evidence status

Prepared from curated project records. This document summarizes existing work; it is not a fresh test execution or independent certification. The separate evidence report identifies supporting records and any outstanding validation.
