Professional Profile

Data Analyst and business intelligence professional with experience across enterprise reporting, SQL analytics, Python ETL, data governance, workflow automation, executive dashboards, and AI-assisted analytics. Currently supporting enterprise data initiatives for the Arkansas Department of Agriculture while completing a Master of Applied Business Analytics. Known for translating complex business processes into trusted data, practical reporting workflows, and clear decision-support artifacts.

Core Capabilities

SQL reporting and Python ETL; Power BI dashboards and executive reporting; data warehousing and dimensional modeling; metadata, data stewardship and governance; requirements analysis; AI-assisted systems and evidence-based documentation.

Current Experience

Arkansas Department of Agriculture

Data Analyst | March 30, 2026 - Present

- Design and develop enterprise reporting solutions that support program leadership, operational reporting, and decision support.
- Build and maintain SQL-based reporting, querying, and data extraction processes.
- Develop Python ETL and data transformation workflows for structured reporting and data modernization initiatives.
- Support enterprise data warehouse planning, metadata standards, data dictionaries, and data governance documentation.
- Serve as a Data Steward for assigned data assets and reporting domains.
- Perform business process analysis, requirements gathering, stakeholder translation, and technical documentation.
- Support SharePoint information architecture, document management, and Power Automate workflow development.
- Create executive dashboards and operational reporting solutions while maintaining public-safe handling of agency-sensitive implementation details.

Faulkner Analytics LLC

Founder / Principal Consultant | Founded January 2026

Analytics consulting focused on business intelligence, executive reporting, data integration, reporting modernization and process improvement.

Professional Experience

Riggs CAT / Riggs Rents

Business Analyst | May 28, 2024 - February 20, 2026

- Developed executive Power BI dashboards, KPI reporting, and operational scorecards for rental operations leadership.
- Built complex SQL queries against enterprise reporting databases and created repeatable reporting processes across internal data sources.
- Automated reporting workflows using Python and supported reusable analytical workflow development.
- Analyzed fleet utilization, equipment lifecycle, rental performance, transportation costs, and operational KPIs.

WESCO International

Sales Operations Analyst | April 2023 - March 2024

- Built Power BI dashboards and reporting views to monitor sales performance, pipeline activity, and territory performance.
- Used Microsoft 365, Power BI, CRM-informed reporting practices, and SQL/data extraction processes to support sales operations decision-making.

Northwest Center

Data Coordinator | October 2021 - March 2023

- Managed operational data processes supporting inventory, logistics, reporting, and business process improvement.
- Maintained electronic data, supported SQL reporting, improved data quality, and built reporting processes for operational decision-making.

Mighty AI

Quality Assurance Analyst | 2018 - 2019

- Validated AI training data and supported machine learning dataset quality.
- Performed quality assurance reviews using annotation standards, issue identification, and quality metrics.

Loy Trucking LLC

Owner / Operations Manager | 2006 - 2016

- Founded and operated a transportation business, managing fleet operations, scheduling, customer relationships, regulatory compliance, budgeting, and logistics.
- Built practical domain expertise in transportation, operations, cost control, and asset-heavy business processes later applied to analytics work.

Selected Projects & Education

MIRA - Model-Agnostic AI Workspace

Directed architecture and governance with AI-assisted implementation. Documented human-approved fixed-task execution and a local automated checkpoint-recovery test, including approval enforcement, helper/actor context continuation and replay safety.

SQL Server Ingestion Framework

Designed contract-driven source profiling, read-only preflight, controlled table provisioning and approved loading. Curated pilot evidence records expected loads and same-source repeat-load protection.

Healthcare AI Analytics

Built a governed analytics prototype around prepared data, validated assets, answerability classification, visual analytics and reporting. Unsupported questions receive an explanation and research plan rather than an invented result.

Professional Portfolio Platform

Built version-controlled professional knowledge structures connecting skills, projects, claims and evidence. Governance rules, source indexes, provenance and coverage reports support document discovery and traceable reuse.

NovaStream Model Validation

Compared classification methods using Python and scikit-learn, with data-quality checks, feature analysis and saved evaluation outputs. A proof of concept informing the Healthcare AI Analytics approach.

Data Management

Developed Python normalization and SQL Server warehouse designs with staging tables, dimensions, facts, constraints and loading scripts for company and market data.

Education

University of Arkansas - Sam M. Walton College of Business

Master of Applied Business Analytics | Expected May 2027

Bellevue College

Bachelor of Science, Computer Science | 2023; Associate of Arts and Sciences | 2019

Technical Toolkit

SQL Server, Python, pandas, NumPy, scikit-learn, Power BI, Power Query, Excel, SharePoint, Power Automate, Git/GitHub, JSON, Streamlit; API-backed analytics and FastAPI experience.
