Samuel Loy Faulkner

Business Analysis | Business Systems | Analytics | Responsible AI

Arkansas, United States | (662) 312-5668 | samuelfaulkner0@gmail.com | linkedin.com/in/samuel-faulkner-739698166

PROFESSIONAL SUMMARY

Business analysis and analytics professional who translates operational workflows and stakeholder needs into reporting requirements, data models, dashboards, and automation. Experience spans state government, equipment rental, sales operations, and logistics. Combines SQL, Python, Power BI, and data governance with a computer science degree and graduate business analytics study. Independent and graduate projects demonstrate practical AI workflow design, human approval controls, and evidence-based validation.

CORE SKILLS

Business Analysis | Requirements Gathering | Stakeholder Communication | Process Documentation | KPI Reporting | SQL Analytics | Python ETL | Power BI | Data Modeling | Data Quality | Metadata | Data Stewardship | Workflow Automation | AI Governance

TECHNICAL SKILLS

SQL Server, SQL, Python, pandas, Power BI, Power Query, Excel, SharePoint, Power Automate, Microsoft 365, Jira, Git/GitHub, JSON/YAML, Streamlit; scikit-learn and model evaluation in graduate projects; OpenAI API integration in prototypes; SAP S/4HANA coursework.

PROFESSIONAL EXPERIENCE

Arkansas Department of Agriculture | *Data Analyst | March 30, 2026 - Present*

- Translate stakeholder needs into reporting requirements, business process documentation, and technical documentation for enterprise data initiatives.
- Develop SQL reporting and extraction processes, Python data transformation workflows, dashboards, and operational reporting for program leadership.
- Support data warehouse planning, metadata standards, data dictionaries, data governance, and stewardship of assigned data assets.
- Support SharePoint information architecture, document management, and Power Automate workflow development.
- Selected by department leadership for the inaugural Arkansas AI Champions program focused on responsible Microsoft 365 Copilot adoption and business use-case evaluation.

Riggs CAT / Riggs Rents | *Business Analyst | May 28, 2024 - February 20, 2026*

- Built executive Power BI dashboards, KPI scorecards, and SQL reporting workflows for rental operations leadership.
- Automated reporting preparation with Python and integrated operational systems, API sources, logs, and reporting extracts.
- Analyzed fleet utilization, equipment lifecycle, rental performance, transportation costs, and pricing using Rouse industry benchmarks.
- Partnered with operations, IT, and leadership to improve data quality, reporting accuracy, and usability for business decisions.

WESCO International | *Sales Operations Analyst | April 2023 - March 2024*

- Developed Power BI dashboards and SQL-based reporting for sales performance, pipeline activity, territory analysis, and regional leadership.
- Supported forecasting, CRM-informed reporting, data extraction, and repeatable sales operations analysis.

Northwest Center (nonprofit) | *Data Coordinator | October 2021 - March 2023*

- Managed data processes supporting inventory, logistics, and operational reporting; maintained SQL reporting and dashboard workflows.
- Supported data collection improvements, data quality, and reporting processes for operational decisions.

Earlier role in another division: Route Driver | April 2019 - October 2021.

Loy Trucking LLC | *Owner and Manager | 2006 - 2016*

- Managed fleet and driver coordination, routes, customer and vendor relationships, compliance, maintenance, budgeting, and financial reporting.

SELECTED PORTFOLIO PROJECTS

MIRA and Professional Portfolio Platform | *Independent systems prototypes | 2026*

- Directed architecture and governance with AI-assisted implementation of local project memory and evidence structures connecting projects, claims, decisions, tasks, and restart context.
- Personally validated a workflow with email approval, a separate human Run action, isolated Python execution, independent result verification, and durable completion.
- Validated bounded local browser and synthetic sales-report demonstrations with human approval and independent output checks.

Crop Bot Regional Yield Screening | *Graduate hackathon project | September 2026*

- Built an interactive corn-hybrid screening application using supplied model checkpoints, regional thresholds, review flags, evaluation metrics, and candidate prediction exports.
- Reconciled region labels and checked live inference against supplied predictions, while making retrospective evaluation and model limitations visible to reviewers.

SQL Server Ingestion Framework | *Portfolio pilot | 2026*

- Designed contract-driven source profiling, read-only preflight, controlled schema onboarding, and approved loading with operator safeguards.
- Validated expected pilot loads and confirmed that repeating the same source did not duplicate business-key records.

Healthcare AI Analytics Platform | *Graduate project | 2026*

- Built a governed prototype using Python, SQL, Streamlit, visual analytics, report outputs, and OpenAI API integration.
- Designed question routing around validated assets and refusal of unsupported clinical or financial claims.

Enterprise Data Management and NovaStream Modeling | *Graduate projects | 2026*

- Developed Python normalization and SQL Server warehouse structures with staging, dimensions, facts, constraints, and loading scripts for company and market data.
- Compared classification models with Python and scikit-learn using data-quality checks, model evaluation, feature importance, and decision-support scoring.

EDUCATION

University of Arkansas, Sam M. Walton College of Business | *Master of Applied Business Analytics | In progress; expected May 2027*

Bellevue College | *Bachelor of Science in Computer Science | 2023*
Associate of Arts and Sciences | 2019
